JEUDI 13 JUIN 2024 / 11h30 **Ariadna BURGOS**, Chercheuse UMR 208, Paloc IRD-MNHN

Marine invertebrate artisanal fisheries in Asia-Oceania

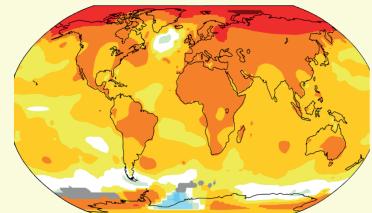

Marine Invertebrate Artisanal Fisheries (MIAF) contribute to food security, nutrition and to national and global economies and growth. Despite their societal and ecological importance and vulnerability to rapid coastal changes, these fisheries remain frequently overlooked in fisheries research, lack of management plans and are marginalized in policy-making processes. Moreover, the role of women, actively involved in these fisheries, is not reflected in fisheries statistics and census data. Today, there is an urgent need for a global perspective in the management of MIAF combined with local assessments and monitoring that integrate fisher's perceptions, views and knowledge. Through an interdisciplinary research carried in Indonesia, Papua New Guinea and Timor Leste, this presentation will assess the diversity and social-ecological dynamics of MIAF, and will seek to identify drivers of change, vulnerability and sustainability of these fisheries in Asia-Oceania.

Key-words: marine invertebrates, fisheries, nutrition, gleaning surveys, women, sustainability.
